SureView Systems Partners with HID Global to offer Access Management Solution with Immix®

Tampa, Florida, Aug. 24, 2009 - SureView Systems today announced that it has partnered with HID Global to offer a turn-key hosted access control services solution for central stations, security integrators and dealers. The web-based service allows central stations and dealers to offer new electronic access control management services to customers wanting to leverage the power of IP and outsource the management of the access control database.

The system utilizes SureView's Immix® platform with HID Global's OPIN® Edge™ IP and VertX™ controllers. This affords dealers the opportunity to manage access, video and alarm services for their customers through a single operator interface and maintain customer data in a single integrated database.

"Partnering with HID to build the Immix® / HID Access Management System has been a critical step in expanding the range of services offered through Immix® and the services that central stations can offer their customer base through a single non proprietary platform," said Matt Krebs EVP of Sales, SureView Systems.

This new Access Control Management Module from SureView is targeted at dealers and central stations seeking to build recurring revenue with a segment of their access control business and be more competitive in the 1 to 16+ door market. This market seeks flexibility with service options, end-users want the option to outsource access control database management to a service provider or the option to manage card additions, deletions, and changes and run reports. SureView's Immix® platform enables central stations and dealers to offer this service using a web portal, eliminating the need for a PC and installed software at the customer location.

HID's Edge IP controller leverages the existing network infrastructure, supports PoE and/or traditional power supply architecture, as well as creates cost and installation

efficiencies at the door. “Immix® and Edge put new doors in play for access control previously excluded because of cost and/or system management complexities,” said Paul Iverson, director, Installation Channel, Networked Access Solutions for HID Global.

“We are pleased to have partnered with SureView,” added Iverson. “By combining SureView’s Immix® technology with our proven access control services business model, they are able to provide customers with the strategy, tactics and support materials needed to successfully implement and support a managed access control service model while further encouraging sales and end-user adoption of managed access control solutions.”

About SureView Systems

SureView Systems is a security software developer providing a video based automated alarm management software platform for central stations and other command centers. SureView's UL classified Immix® product provides users with a single platform to receive alarm events from industry standard receivers, video cameras or DVRs, video analytics, access control systems and VoIP audio. Immix® integrates a wide range of security systems providing a single control platform and service delivery for diverse hardware configurations to support developing customer needs.
