CLOUD BASED REMOTE MONITORING ANNOUNCED AT IFSEC

Key Players Join Together For European Announcement Of Immix Cloud

Immix Cloud, the latest generation of Cloud-based IP monitoring solutions, was announced to UK and European users at IFSEC 2011. Immix Cloud is an innovative new IP-based solution that allows security events to be remotely monitored from any location and makes user services available through mobile devices including iPhone, Android-based mobile phones and the latest tablet computers such as the Apple iPad.

Developed by SureView Systems, the leading provider of video-based automation platforms for the security alarm industry, Immix Cloud could be seen on a number of different stands throughout the show including Honeywell. According to Daniel Wan, UK Channel Marketing Leader for Honeywell Systems Group: "Immix Cloud provides our customers with a cost-effective way to monitor alarm events from diverse sources including video, audio, access control and building management systems. It reduces the cost of monitoring in a wide range of environments."

Videcon PLC, a leading UK based distributor of CCTV products and services, also featured Immix Cloud demonstrating how this new remote monitoring solution provides the flexibility to monitor security events anywhere, customise service offerings and simplify IT deployments.

"We are pleased to have the Concept Pro VXH264 integrated with Immix Cloud from SureView Systems," commented Andy Croston, Sales Director of Videcon. "Immix Cloud delivers the next generation of monitoring services for Commercial stations and Private Command Centres. It significantly reduces operational costs and enables an even wider range of organisations to benefit from remote monitoring."
