AVI-SPL's Control Room Group and SureView Systems Partner to Develop PSIM Testing and Training Center

CRG will showcase PSIM at ASIS International 2011 Sept. 19-22

TAMPA, Fla., September 8, 2011 – AVI-SPL's Control Room Group, the leader in design and integration of mission critical control room and physical security systems has partnered with SureView Systems, developer of Immix®, the leading video-based automation platform for the security industry, to develop a complete solution for customers running their own command and control centers and who need to tie disparate physical security systems together.

With this partnership, the companies have developed a Physical Security Information Management (PSIM) Testing and Training Center at AVI-SPL headquarters in Tampa, Fla. This advanced Physical Security and Control Room technology lab will allow comprehensive testing, design and training for surveillance, video analytics, video streaming and storage, access control and mass notification all flowing through the Immix platform. The system includes technology from Bosch, Panasonic, Assa Abloy, Intransa, Milestone, VideoIQ, Salient and other manufacturers.

"We partnered with SureView to develop this testing and training center so our customers could simulate actual situations and events they may encounter in the field. Through these simulations, they can select the best-suited equipment for their application and train their staff in an environment focused on providing a high level of situational awareness, alarm response and productivity," said Michael Spiessbach, market manager for the Control Room Group, AVI-SPL.

AVI-SPL and SureView will showcase a demo of SureView's integrated solution at the upcoming ASIS International show in Orlando, Fla., September 19-22 at booth #3761.

"Immix specializes in tying together disparate security equipment into a single PSIM platform. Combining the information and situational awareness of Immix with the latest control room technology provided by the AVI-SPL Control Room Group ensures security officers in the command center can access real-time information in the most efficient and effective way," said Simon Morgan, technical director for SureView Systems.

A properly designed and integrated control room combined with Immix's single operational platform allows owners, security directors and managers the ability to maximize the productivity of physical security guards, security officers and operators through improved situation awareness and real-time event monitoring, delivering an increase in the overall security of the monitored facilities.

About AVI-SPL's Control Room Group

The Control Room Group, a division of AVI-SPL, specializes in the design, integration, installation and support of 24/7/365 mission critical control room facilities and Physical Security Systems. By working with more than 600 manufacturers of control room components, the Control Room Group consistently provides custom designed control room facilities utilizing common off the shelf (COTS) components that meet the unique requirements of its clients. For more than eight years, the Control Room Group has designed and built mission control room facilities for a variety of high level government, transportation, corporate and utility and process control clients. For more information about the Control Room Group, visit <http://crg.avispl.com>.

About SureView Systems

SureView Systems owns, develops, sells and supports the Immix product line. Immix Enterprise and Cloud are video centric software platforms designed to receive alarm events from video, video analytics, access control, automation systems and GPS location aware devices, providing a single point of control. The products are UL Certified in the USA and BS8418 compliant in Europe. For more information please visit www.SureViewSystems.com
