FOR IMMEDIATE RELEASE

### ***SureView Announces Integration with Videofied Offering Alarm Verification and Video Surveillance***

**Tampa, Florida USA**— SureView Systems, developer of Immix<sup>®</sup>, the leading video-based automation platform for the security alarm industry, and Videofied, developer of the MotionViewer, a self-powered wireless radio device combining a PIR and digital day/night vision camera in one unit, announce a significant enhancement to their integration of Videofied with Immix and Immix Cloud. This integration when combined with the new video verification interface in Immix Cloud offers users a feature rich way to deliver these services to their end customers.

Immix enables central stations and command centers to deliver the next generation of monitoring services such as event-based video verification, interactive monitoring, remote guard tours, video escorts, and unattended deliveries while reducing operational costs. Immix achieves this by consolidating video, access control, audio and alarm events into a single point of control.

The Videofied MotionViewer comes in indoor and outdoor models and is the central-station-friendly video intrusion alarm. This enhanced Videofied integration enables central station operators to receive both the alarm signal and the corresponding video clips from Videofied to verify a crime in progress and dispatch law enforcement. Operators can now view multiple alarm clips, trigger

remote relays, establish a two way call to the Videofied panel and send arm/disarm commands.

Immix records all video and actions of the operator in the full time date stamped multimedia audit trail available for station management and customers to review. The Videofied integration can be combined in Immix with other onsite video to offer a blended approach to video verification.

“The new Video Verification interface in Immix Cloud is a game changer. It delivers a feature set that exceeds anything in the market today. Combining this with the enhanced integration of the market leading video verification device, Videofied, creates a system and level of service every central stations needs to offer.” said Simon Morgan, Product Manager of SureView Systems.

SureView Systems will be offering special pricing for Videofied, making it even easier for central stations to begin monitoring Videofied alarms. Using Immix with Videofied will enable central stations to branch out and add more video capabilities and sophistication, eventually expanding into total video surveillance with other CCTV cameras. “The integration of our two systems creates an easy entry for central stations into the video market space while enabling them to branch out and add sophistication with Immix,” stated Keith Jentoft, president of Videofied U.S.

#### About Videofied

Videofied is made by RSI Video Technologies, a world leader in video intrusion alarms with over 500,000 systems installed in both residential and commercial applications. Videofied, with its U.S. Headquarters based in St. Paul, Minnesota, is the only security system that has been endorsed by the National Sheriffs Association. For more information, please visit [www.videofied.com](http://www.videofied.com).

#### About SureView Systems

SureView Systems owns, develops, sells and supports the Immix product line. Immix® Enterprise and Cloud are video centric software platforms designed to receive alarm events from video, video analytics, access control, automation systems, and GPS location aware devices, providing a single point of control.
